
Constructing Green Futures

This event for **FET Directors, Managers, Assistant Managers** and **all relevant FET staff** focused in the area of green construction will examine the future of green construction, highlighting both innovations and skills gaps within this sector. It will also give an overview of vulnerable construction careers due to climate change policy and the many exciting opportunities for the FET sector to grow their Green Skills provision in response.

We are delighted to have confirmed speakers from **MosART Architects, Technological University of the Shannon, the Irish Green Building Council, Laois Offaly ETB and Technological University Dublin.**

SOLAS will then lead an afternoon on funding mechanisms to support green construction initiatives.

Please circulate accordingly.

Date:
26th Sept 2023
